

Around July 2026, ACG redesigned our Spread Axle Fender to allow the concealment of the fasteners by moving the attachment point to inside the wheel well. This requires a ¾” wide strap to be welded in the faceplate to allow the fasteners to secure the fender.

The correct replacement fender can be determined by looking at the profile of the fender extrusion and also the location of the fasteners used to attach it to the trailer

Legacy Spread Axle Fender

This fender has no return lip to the inside of the wheel box and will have the fasteners present of the face of the fender

Part	Description
351701	FENDER, POLISHED ALUMINUM, SINGLE, SPREAD AXLE, 40-1/2", USED PRIOR TO 2026 REDESIGN, NO RETURN LIP INTO WHEEL WELL
